#### **Abstract**

The question of education is one of the most actual issues nowadays. In the same time of state economic, political and sociological side developing the educational sphere should develop with no less tempus. Nevertheless, the question is how to construct correct policy to make right decision in development higher educational in microstate level. It will be interesting to try to use consumer protection legislation.

Actually, consumer protection legislation is universal form to make practice in law to get some division to development. Moreover, it will be correct to improve legislation with adding into the law some precedents about educational conflicts. In whole, student, who is study in particular program pay some fee to have it, and University, college, special courses are sale and their product is education (1). In the most countries, especially in the Post Soviet Union Countries there exist retake system. But, is it correct to fall

student and take fee again, because it mean only one – that quantity of given education was actually bad (2).

Mostly educational system is directly connected with consumer protection legislation. Legal relationship between student as consumer and teacher as salesman are complementary clear to construct in point of consumer protection legislation(3). And according to consumer protection legislation in cases when students fall exam or drop the course it is mistake of teacher. The object of this relationship is personnel interest of student in study. Additionally, if student will want to study he will be more active during the course and semester. And this interest is the product of teacher(4).

Consequently, as a product could be structured different short time courses, including online courses, which are available nowadays everywhere. In case of higher education teacher is specially operated as salesman for student and University is concretely salesman for state, because the main goal of university is to prepare qualified specialists in narrow specialization (5). That's why to improve knowledge level in macro level it should be actual to mention in development of whole political, social, economic and other spheres(6).

Commonly it is obviously that all state spheres are closely related with educational sphere, which is based on consumer protection legislation. In additional most educational conflict are concentrated on retakes and incorrect drops during the fall and spring semesters(7). It will be good hypothesis that in the same time where teacher could interest student the problem of education will sharply decrease. That's why it is very important to use consumer protection legislation in education(8).

In conclusion, there has been a lot of scientific evidence that countries with developed education system have successful policies in all directions, and questions of higher education, is closely related with consumer protection legislation. And object of these legal relationships is personnel student interest, which is very important to lobby by teachers as salesmen.
